

## PRESS RELEASE

### For immediate release

## Number One Systems and Ucamco collaborate to fully integrate Gerber X2 in Easy-PC

Tewkesbury, UK. July 23<sup>th</sup>, 2015 – Number One Systems. – the PCB Design Software company delivering low cost PCB Design tools has announced the successful integration of Gerber X2 in Easy-PC 19.

Working closely with Ucamco, the developer of the Gerber format, Number One Systems has successfully implemented Gerber X2. The output has been fully verified by Ucamco, who confirm it conforms to the X2 specification.

Ucamco launched Gerber X2 with a single goal in mind: to provide a robust, standardised method for automatically transferring layout data and valuable PCB design information from CAD to CAM. Extended Gerber has always been able to handle the first part; the image data. With Gerber X2, the PCB industry's de facto standard image format is even better. That's because Gerber X2 offers a new format for the additional design data that is clear, unequivocal and automatically machine-readable, and that fully supports the existing Gerber image data format. X2 maintains the trademark simplicity for which Gerber has always been known and used. For further questions you may have regarding Gerber X2, there is a FAQ page on the Ucamco [website](#).

Number One Systems' Marketing Manager Ty Stephens commented: "delivering the Gerber X2 Format maintains the commitment we have to our valued customers in providing the latest technology requirements in the industry. In Gerber X2, Ucamco have given a format that provides greater transparency and information in the output stage of the PCB design process."

Ucamco's Managing Director Karel Tavernier states: "Ucamco is honoured that a well-respected company such as Number One Systems have implemented such a robust Gerber X2 output less than one year after the release of the Gerber X2 specification. By supporting X2 Number One Systems not only helps its customers to remain abreast of technology, but is also a good corporate citizen helping the whole industry to move along the practical path forward."

### Number One Systems Overview

For over 30 Years Number One Systems have been delivering PCB Design Software. Starting with its DOS product range in the 1980's, the software is now on version 19 of the award winning design software Easy-PC.

### Ucamco Overview

Ucamco (formerly Barco ETS) is a market leader in PCB CAM and Pre-CAM Software, Laser Photoplotters and Direct Imaging Systems. They have more than 25 years continuous experience developing and supporting leading-edge front-end tooling solutions for the global PCB industry. Ucamco help fabricators world-wide raise yields, increase factory productivity, and cut enterprise risks and costs.

In 1998 Ucamco published the Extended Gerber Format Specification, also known as RS-274X. In 2014, they extended this format with attributes to provide the Gerber X2 format.
