

## PRESS RELEASE

### Ucamco release FlashRip

Ucamco (formerly Barco ETS), a leader in laser photoplotters and software for the PCB industry, announce the release of their new FlashRip raster image processor for their laser photo plotters. The new raster image processor achieves higher productivity plotting for HDI PCB's & CSP substrates.

Today's PCB design roadmap calls for increasingly complex boards with higher component densities and finer features. To compete in today's global market fabricators must make every process faster and more accurate.

FlashRip is optimized for ripping and plotting very fine line images down to 4 µm features for High Density Interconnect (HDI) PCBs and Chip-Scale Packaging (CSP) substrates for BGA, FC-BGA/LGA and FC-CSP packages. Depending on plotter model and job complexity the throughput can increase up to 100% and more.

Karel Tavernier, Ucamco's Managing Director, comments: "Our new FlashRip shows once again the continuing R&D effort in our laser photoplotters as well as our commitment to provide our customers with the best tools".
