SilverWriter Phoenix xP

- Glass Master accuracy
- Resolutions up to 40,640 ppi
- Improved registration
- Unrivalled 24/7/52 reliability
- Compatibility & Upgradeability

Improved registration

Dynamic beam positioning and the patented stress-free film loading system ensure unrivalled **geometric accuracy** for precise side-to-side registration.

Unrivalled 24/7/52 reliability

Today's production climate demands films fast **24/7/52**. The SilverWriter Phoenix-P uses Ucamco's latest film-handling and operational sequencing to deliver market-beating **film throughput** at all plot resolutions, even for the most complex PCBs. **3 magazines** can hold a total of **450 sheets** of film of 3 different sizes to give maximum plotting flexibility and cost control. The redesigned drive system delivers unparalleled levels of uptime and **long-term reliability** as well as allowing a 30% more **compact footprint**

Compatibility & Upgradeability

The Phoenix-P reads plot instructions in DPF, ODB++, OI5000 (Expert) or MDA formats fully automatically so that you can wheel it into your CAM environment without the need for time-wasting integration. The Phoenix-P is available as an **upgrade** to any SilverWriter 8000 plotter.

"Glass-master" accuracy

The global PCB industry remains committed to phototooling as its key imaging technology but the most advanced products require films with **"glass-master"** sharpness and accuracy. The SilverWriter Phoenix-P has been developed to meet this challenge using sub-micron imaging technology. Based on the market-leader SilverWriter series the Phoenix offers a choice of plot resolutions up to **40,640 ppi (0.6µm)**.

Unique Optical System

The SilverWriter Phoenix uses an optical system specially designed for imaging fine lines and spaces with ultra-sharp edges and very precise width control. Ucamco's unique **sub-micron** pixel-placement algorithm eliminates the pixel-jump errors found on conventional plots: fine lines and tight spaces are positioned consistently to exact tolerances. **Syntectic modulation** ensures an ultra-sharp line-edge and precise line-widths down to **7µm** on new generation high-resolution films.

Get more out of your photo plotter investment with GCS software

Ucamco's **Geometric Correction System (GCS)** automatically modifies phototools to compensate for the non-linear and linear distortions introduced into a panel during the manufacturing process. By improving layer registration, GCS delivers increased factory yields and extends the plant capabilities with confidence into higher levels of PCB technology.
