# VHS script: insertOpenings.vhs

This script creates a 0.2mm opening every 10mm on every draw and arc of a layer.

The size and the space between the holding webs can be changed to your requirements.

A very useful tool e.g. for cutting foils or thin laminates.
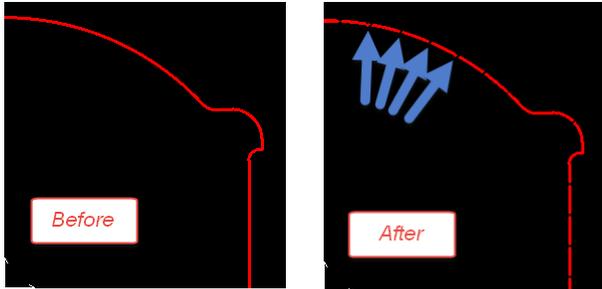

The script can be used in 3 ways:

- directly with Visual Hyperscript Editor,
- placed in the Visual Hyperscript Menu
- placed as an icon on a toolbar

VHS script: model_contour.vhs

This script supports the user in converting contour pads into COMplex pads.

• Place this script with "Loop" activated in the Visual Hyperscript Menu.
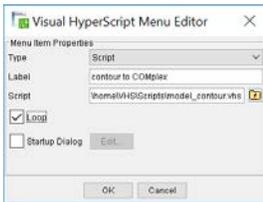

• Activate the layer you want to work on

• Click the Highlight Pads button to highlight the pads in light red
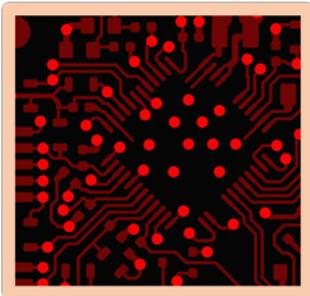

• Start the script from the Visual Hyperscript Menu
  It will select all contours and ask to define the pads
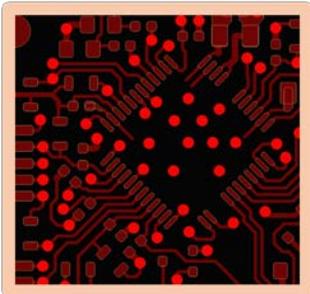

• Click on the pads and every pad with the same definition will be remodeled
  to COMplex pads and immediately show up in light red.

  Layout after 2 clicks
