

# REFERENCE GERBER VIEWER

## Quick Start Guide

Actions that act on a layer (query object, measure between objects), always work on the red layer. You can show any layer in red by using the color buttons in the 'Displayed layers' list on the left.

The layer info box also shows info about the red layer.

You can upload multiple files at a time. We have added support for the following file formats: .IPC, .EX2. It should be noted that if the file extension is not as expected the file may be skipped or interpreted as an incorrect format so it is best to upload files with the correct extension (letter case, upper or lower, is ignored). In the table below you will find which extensions are interpreted as what format. Anything not recognized by the rules in the table is assumed to be gerber.

Extensions	Interpreted Format	Information
<b>.nc, .drl, .ex2, .exc, .ncd, .d*</b>	Excellon	Complete Excellon files only.
<b>.ipc, .356, .356a</b>	IPC-356	An IPC file is split into its constituent layers.
<b>Generic ones such as .pdf, .zip, .jpg, .docx, ...</b>	N/A	These files are ignored.
<b>All other</b>	Extended Gerber, X1 and X2
