

Leading International Supplier of PCB Software and Equipment seeks
SOFTWARE R&D ENGINEER
With knowledge of Japanese Language

Ucamco is a leading specialist in manufacturing CAM and Pre-CAM software, photoplotters and direct imaging systems for the global Printed Circuit Board industry.

In over 25 years' continuous experience in the development, supply and support of leading-edge front-end tooling solutions, our uncompromising pursuit of engineering excellence has always been key to our success. Our product goals are equally ambitious: through best-in-class performance, long-term reliability and continuous development, we keep our clients at the cutting edge, enabling them to increase their yields and productivity while reducing their enterprise risks and costs.

That's why many of the world's leading PCB manufacturers increasingly rely on Ucamco, while ever more major AOI, direct imaging and electrical test equipment vendors choose to OEM Ucamco software for their front-end functionality.

We are currently looking for a team-oriented, enthusiastic individual to support our growing software development needs in Gent and Prague to write, maintain and document our CAM programs for the PCB industry.

We are looking for a team player who is

- Motivated, independent and enterprising
- Self-starting and self-motivating to overcome challenges (not waiting for orders)
- Strongly customer oriented with good technical communication skills
- Capable of writing technical project specifications based on client discussions
- Looking for job where he/she plans to stay at least 3 years

With

- A Bachelor-level degree (a Masters in computer science is a plus)
- Fluent knowledge of English and Japanese
- Proven experience in programming (applicants should reference previous projects or positions)
- Technical skills (using our own programming capabilities test)
- Aptitude for Java development
- Good algorithmic skills
- Knowledge of the Windows environment
- A working knowledge of English (fluency is a plus)
- Knowledge of C/C++, the UNIX environment and Eclipse development, while not necessary, are an added advantage

The right candidate will be a valued member of a friendly, team-oriented, growing international company that is a leader in its field and is dedicated to excellence in all it does. Dynamic and fun, the company offers a great working atmosphere, and this new position is forward-looking and open.

Sounds like your kind of job?
